

HSE POLICY

We firmly believe that every accident can be prevented, and we do everything in our power to avoid harm to people and the environment.

We, as employees or managers, have a shared responsibility for Health, Safety and Environment (HSE). Whether with our customers, suppliers or business partners, we work to achieve excellent HSE performance throughout our project execution process.

We trust our managers and expect them to carry out risk assessments and always take a proactive approach to HSE. They must be known at all times by all employees working on a pilot or prototype and must be updated whenever the predefined conditions change. Preventive measures must be implemented accordingly.

All employees are responsible for following safety instructions and always using the appropriate protective equipment. Everyone must commit to our HSE management system, alert others to and communicate about situations that present risks so that action can be taken to eliminate them.

Each of us must report any accident, incident or near miss that may have an impact on Health, Safety and the Environment. Each of these events is analysed and we learn from these experiences in order to achieve our ongoing goal of zero accidents.

CORINE DUBRUEL
EXECUTIVE PRESIDENTE HYSILABS
